**Hoosick Falls, NY – Sampling for possible presence of GenX in drinking water supply:** The St. Gobain company had used PFOA that contaminated the Hoosick Falls municipal drinking water supply. The site was placed on the federal Superfund list. The State of New York requested the lead role in managing the response. St. Gobain built a treatment plant for the municipal water supply. In recent months NY learned that St. Gobain switched from using PFOA to using GenX during the past decade. The State will be testing the groundwater, raw water intake and finished water to see if GenX is present. The sampling is scheduled for the week of Jan. 22, but could proceed even earlier.

#### **EPA Orders Further Assessment Work at Wolverine Tannery**

Key Message: On January 10, 2018, Region 5 issued a unilateral administrative order to Wolverine World Wide Inc. to conduct further assessment and potential cleanup work at its former tannery and at the House Street landfill in Rockford, Michigan. The order requires additional investigation and characterization of soil, groundwater and river sediment contaminated with hazardous substances including arsenic, chromium, mercury and ammonia. EPA is working with the state of Michigan on a coordinated enforcement approach at the Wolverine sites in and around Rockford that are contaminated with PFAS and hazardous constituents. Michigan also issued an order to Wolverine on January 10, to address drinking water contamination from its operations.

### **HOT ISSUES**

**Wolverine Worldwide Tannery and House Street Disposal Site:** On January 10, Region 5 issued a CERCLA Administrative Order under to Wolverine Worldwide, Inc. to undertake removal actions at the main tannery facility and disposal area to assess and address hazardous substance contamination. Michigan recently filed a complaint action against Wolverine seeking declaratory and injunctive relief with respect to PFAS contamination in soil and groundwater. The EPA and State actions reflect a joint federal-state effort to address, respectively, hazardous substances and PFAS contamination in drinking water associated with the former Wolverine facility.

## Office of Research and Development

Administrator,

Thank you for stopping by ORD's senior leadership meeting this week. We had a very productive conversation about the steps we need to take to make sure we are operating in the most efficient and impactful way to meet Administration priorities. In addition, our work on PFAS continues and we will be providing you with regular updates on our progress. Together with OW, OCIR, and other members of the cross-agency PFAS group, we are briefing bipartisan staff from the Senate Environment and Public Works Committee on PFAS this afternoon. The briefing will be an overview similar to the briefing we gave the Senate Appropriations Committee in early November.
